

Kentfield and IVC

Disadvantage

- Classrooms and event spaces do not have audio equipment for the hearing impaired

Goal

- All classrooms and event spaces should be built / retrofitted with preferably built in equipment like a copper loop wire or at least provide free standing equipment for the hearing impaired.
 - o The best choice is equipment that is compatible with Bluetooth hearing aids

Kentfield Only

Short Term Goal

- Learning Resource Center and Student Services Building are most needed and should be the heart of the campus
 - o Student survey supports the need for these spaces
 - o Students require space outside the classroom

Wish List

- Bigger ESCOM room is critical due to the large (1600) population which has grown from 400 a few years ago
 - o Space should be equipped fully with devices to help the hearing impaired because many seniors have hearing loss
- Add space for an International Student Lounge
- Lounge space is need for the Learning Committees
 - o The word lounge miss represents the work and active learning that occurs in these spaces
- Amphitheater

Disadvantage

- Current arrangement only provides one large space for study and eating in the Student Services Center

Goal

- Student area should consist of many smaller spaces instead of one large one
- Students should be able to modify the study and social spaces themselves to provide the type of activity/environment they need at that time

IVC

Wish List

- Amphitheater
