

ATTENTION: Notice of Construction Activity

College of Marin in collaboration with the Learning Resources Center's project team have finalized the dates that they will pour over 5,000 cubic yards of concrete for the building foundation.

The pours will happen over **3 separate Saturdays**.

The construction team will begin mobilizing at 3 am for each pour.

Date 1: November 18, 2023

Size of pour: 1,850 cubic yards (cy)

Duration of pour and finishing: 15 hours

Date 2: December 2, 2023

Size of pour: 680 cy

Duration of pour and finishing: 10 hours

Date 3: December 16, 2023

Size of pour: 2,500 cy

Duration of pour and finishing: 18 hours

Saturdays have been determined as the best days due to the following considerations:

1. There is significantly less traffic on the roads, bridges, and freeways between the source location of the material and the site of the LRC which will allow for them to pour more material at a faster rate.
2. There is significantly less of an impact on the roads around the College since schools and many businesses are closed completely or for a vast majority of the pour time.

Continued on reverse.

835 College Avenue

There are 3 very critical factors related to pouring that much concrete:

1. Getting the concrete to the site of the LRC.
2. Getting the concrete trucks onto the site, emptied, then back offsite so they can return to the plant for a refill and return.
3. Weather. *Alternate dates have been identified if necessary.*

We appreciate your collaboration as we work through these necessary impacts.

Please reach out to **facilities@marin.edu** with any questions or concerns.
